THE RENOVATION INTERFACE FOR ASIA

Better spaces. A repeatable *business.*

SECHA turns renovation from a one-off project into a product customers can choose, shape and bring to life.

01 / THE MANIFESTO

The world doesn't just need more space. It needs better ways to make it.

Making a space should be considered, personal and clear. Today, renovation asks customers to buy uncertainty: an evolving brief, a moving price and a finish line that keeps changing.

We believe in freedom in the choices, clarity in the commitment and discipline in the delivery. The ambition is not to make every space the same. It is to make the system behind each space repeatable.

US$300K	30%	40%
Project value served to date	Target package gross margin	Faster modular delivery, reported

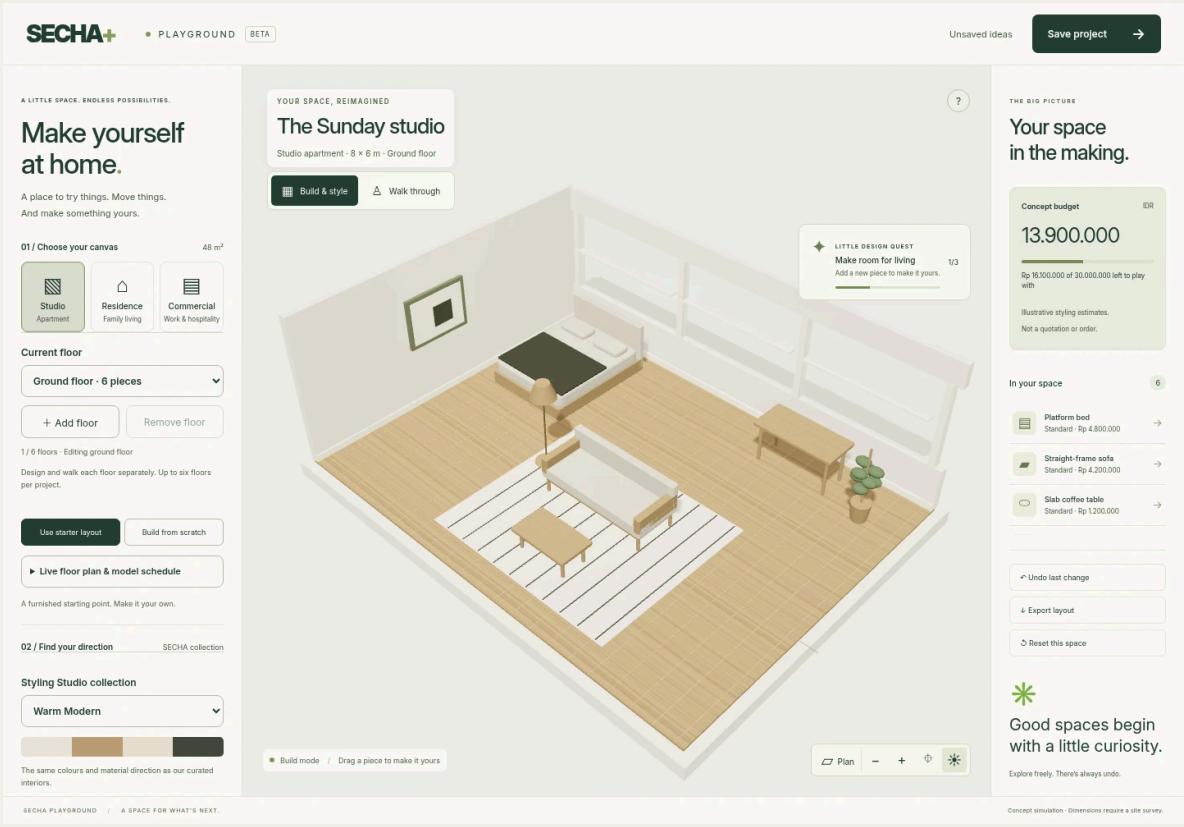

Company-reported figures from SECHA's 2026 business update. Project value is not recognised revenue. The 30% margin is a target, not realised performance. The delivery improvement has not been independently verified; its underlying measurement baseline was not supplied.

Founder & CEO / SECHA · Jakarta, Indonesia

The interface is already taking shape.

Studio+ lets customers explore a room, change material directions, place furniture and walk through their ideas. The public playground supports studio, residential and commercial spaces, floor controls, saved layouts and export.

Actual public Studio+ source rendered locally. Concept layouts and budgets are illustrative. This is a design tool, not evidence of live quotation, financing or fulfilment integrations.

The operating thesis

Turn customer intent into one controlled job file: scope, bill of materials, supplier allocation, installer sequence and quality proof.

The physical engine

GX-100 factory-prepared snap panels standardise the shell, furniture and installation sequence. Software defines the promise; the physical system fulfils it.

Earn on delivery. Repeat the outcome.

A US$5,000 package is designed to produce US$1,500 in gross profit. Fixed scope controls price, GX-100 controls time, and the interface controls changes. Financing supports affordability and conversion.

Target unit economics / per package	US$
Package value	5,000
Fulfilment cost / 70%	3,500
Target gross profit / 30%	1,500

Illustrative scale case, not a forecast: 10,000 annual packages at US$5,000 = US$50M project value and US$15M gross profit if the 30% target margin is achieved. Gross profit excludes operating expenses.

Distribution

Property agents and banks are the proposed demand channels. The SECHA menu converts intent into packages, fulfilled through the GX-100 network.

The next milestone

Productise founder-led projects into measurable package throughput: quote velocity, conversion, cycle time, gross margin and referral.

Raising US$1M.

Planned use of funds	Allocation
Product / interface + job-file control	45% · US$450K
GX-100 / modular delivery	35% · US$350K
Distribution / agent + bank channels	20% · US$200K
